

3D should be quick, easy and affordable

Why is it that 3D design still strikes fear into the heart of most designers?

Could it be because you almost have to be a mathematician to draw a coffee pot?

Maybe because it takes forever to learn?

Or is it because most 3D software is extremely expensive?

3D software should make your life easier!

It should help you express your ideas, help you create your designs and let you show your ideas to the world...and it shouldn't take forever to learn.

Design8 offers 3D software that helps you sculpt and present your design, is easy to learn and offers high value for money.
